1 Introduction

1.1 What is the LPS8N

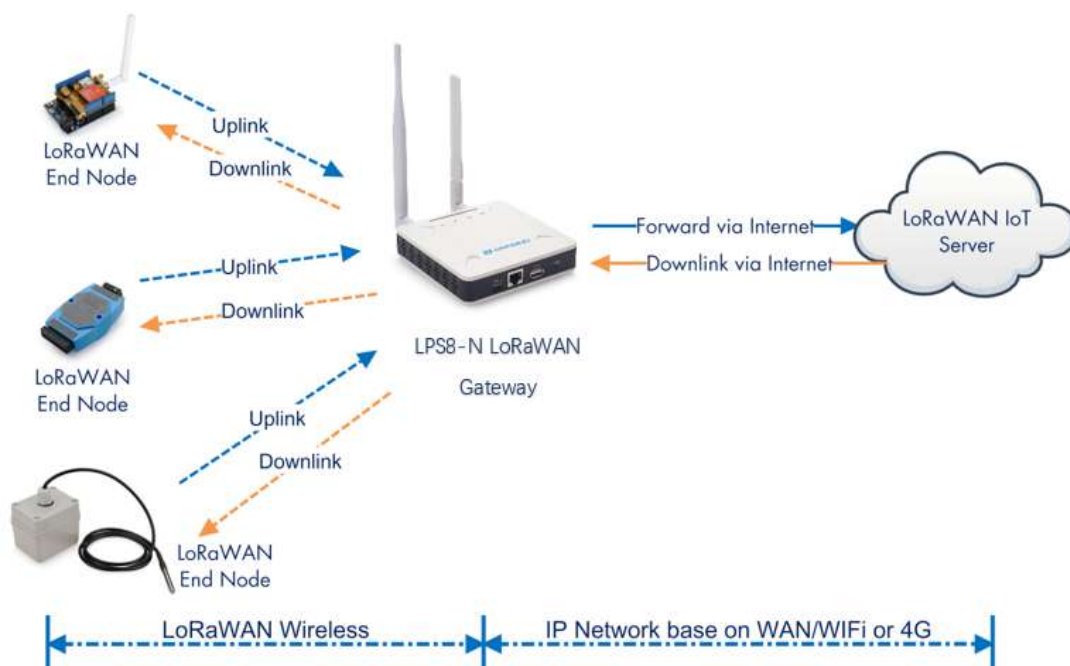

The LPS8N is an open source **LoRaWAN Indoor Gateway**. It lets you bridge LoRa wireless network to an IP network via WiFi, Ethernet, 3G or 4G cellular network. The LoRa wireless allows users to send data and reach extremely long ranges at low data-rates.

The LPS8N uses **Semtech packet forwarder & LoRaWAN Basic Station** and fully compatible with LoRaWAN protocol. It includes a **SX1302 LoRa concentrator**, which provides 10 programmable parallel demodulation paths.

LPS8N has **pre-configured standard LoRaWAN frequency bands** to use for different countries. User can also **customize the frequency bands** to use in their own LoRa network.

LPS8N can communicate with ABP LoRaWAN end node without LoRaWAN server. System integrator can use it to integrate with their existing IoT Service without set up own LoRaWAN server or use 3rd party LoRaWAN service.

LPS8-N in a LoRaWAN IoT Network:

1.2 Specifications

Hardware System:

Linux Part:

- 400Mhz ar9331 processor
- 64MB RAM
- 16MB Flash

Interface:

- 10M/100M RJ45 Ports x 1
- WiFi : 802.11 b/g/n
- LoRaWAN Wireless
- Power Input: 5V DC, 2A, Type C
- USB 2.0 host connector x 1
- Mini-PCI E connector x 1
- SX1302 + 2 x SX1250

WiFi Spec:

- IEEE 802.11 b/g/n
- Frequency Band: 2.4 ~ 2.462GHz
- Tx power:
 - ✓ 11n tx power : mcs7/15: 11db mcs0 : 17db
 - ✓ 11b tx power: 18db
 - ✓ 11g 54M tx power: 12db
 - ✓ 11g 6M tx power: 18db
- Wifi Sensitivity
 - ✓ 11g 54M : -71dbm
 - ✓ 11n 20M : -67dbm

LoRa Spec:

- Up to -140 dBm sensitivity
- 70 dB CW interferer rejection at 1 MHz offset
- Able to operate with negative SNR, CCR up to 9dB
- Emulates 49 x LoRa demodulators and 1 x (G)FSK demodulator
- Dual digital TX & RX radio front-end interfaces
- 10 programmable parallel demodulation paths
- Dynamic data-rate (DDR) adaptation
- True antenna diversity or simultaneous dual-band operation

Cellular 4G LTE (optional):

- Quectel [EC25 LTE module](#)
- Micro SIM Slot
- External 4G Sticker Antenna.

- Up to 150Mbps downlink and 50Mbps uplink data rates
- Worldwide LTE,UMTS/HSPA+ and GSM/GPRS/EDGE coverage
- MIMO technology meets demands for data rate and link reliability in modem wireless communication systems

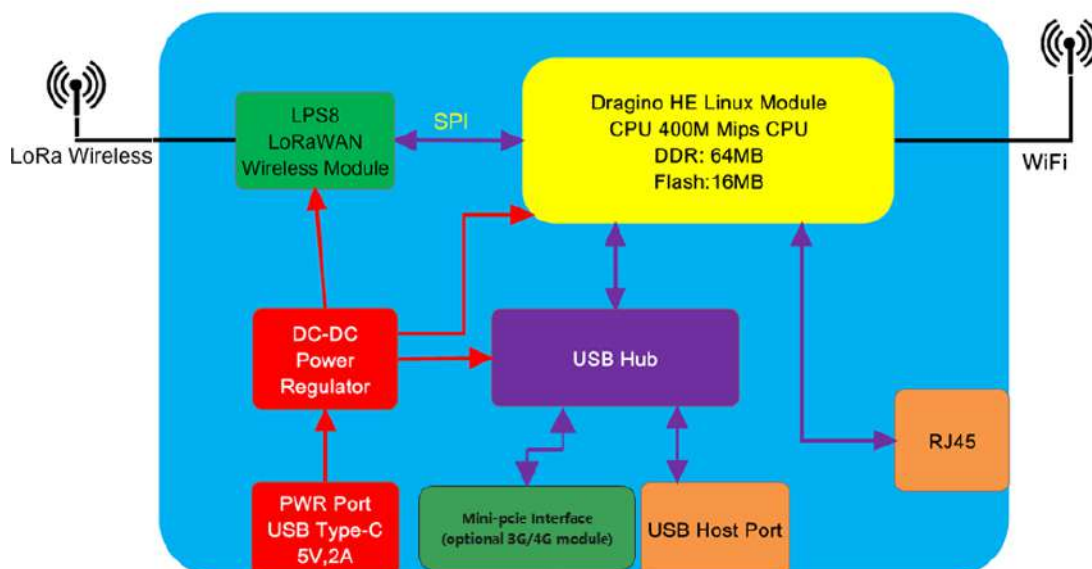

Max Power: 5v, 1.3A

1.3 Features

- ✓ Open Source OpenWrt system
- ✓ Managed by Web GUI, SSH via WAN or WiFi
- ✓ Remote access with Reverse-SSH or remote.it
- ✓ Emulates 49x LoRa demodulators
- ✓ LoRaWAN Gateway
- ✓ 10 programmable parallel demodulation paths
- ✓ Pre-configure to support different LoRaWAN regional settings.
- ✓ Allow to customize LoRaWAN regional parameters.
- ✓ Support Local decode ABP end node info and transfer to MQTT server
- ✓ Support different level log in.
- ✓ Support Semtech Packet Forwarder
- ✓ Support LoRaWAN basic station.
- ✓ Optional 3G/4G cellular connection

1.4 Hardware System Structure

LPS8-N System Overview:

1.5 LPS8N Applications

1.6 LED Indicators

LPS8N has totally four LEDs, They are:

- **Power LED** : This **RED LED** will be **solid on** if the device is properly powered.
- **LoRa LED** : This **RGB LED** will **blink GREEN** when LoRaWAN module starts or transmit a packet.
- **SYS LED** : This **RGB LED** will shows different colors on different state:
 - ✓ **SOLID BLUE**: Device is alive with LoRaWAN server connection.
 - ✓ **BLINKING BLUE**: a) Device has internet connection but no LoRaWAN Connection. or b) Device is in booting stage, in this stage, it will **BLINKING BLUE** for several seconds and then with **SOLID RED** and **BLINKING BLUE** together
 - ✓ **SOLID RED**: Device doesn't have Internet connection.
- **ETH LED** : This LED shows the ETH interface connection status.

2 Access and Configure LPS8N

The LPS8N is configured as a WiFi Access Point by factory default. You can access and configure the LPS8N after connecting to its WiFi network, or via its WAN Ethernet port.

2.1 Find IP address of LPS8N

2.1.1 Connect via WiFi

At the first boot of LPS8N, it will auto generate a WiFi network called **dragino-xxxxxx** with password:

dragino+dragino

You can use a PC to connect to this WiFi network. The PC will get an IP address 10.130.1.xxx and the LPS8N has the default IP **10.130.1.1**

2.1.2 Connect via Ethernet with DHCP IP from router

Alternatively, connect the LPS8N Ethernet port to your router and LPS8N can obtain an IP address from your router. In the router's management portal, you should be able to find what IP address the router has assigned to the LPS8N. You can also use this IP to connect.

2.1.3 Connect via WiFi with DHCP IP from router

If the LPS8N already connect to the router via WiFi, use can use the WiFi IP to connect to LPS8N.

2.1.4 Connect via Ethernet with fall back ip

The WAN port also has a [fall back ip address](#) for access if user doesn't connect to uplink router. Click [here](#) to see how to configure.

2.2 Access Configure Web UI

Web Interface

Open a browser on the PC and type in the LPS8N ip address (depends on your connect method)

<http://10.130.1.1/> (Access via WiFi AP network)

or

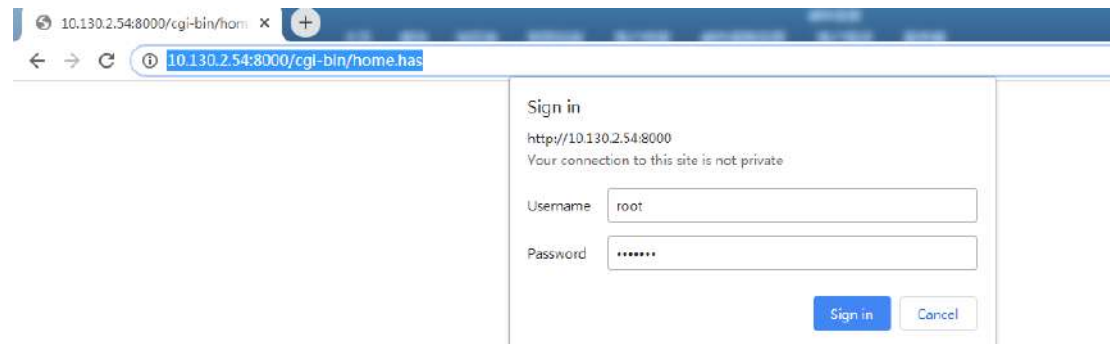

http://IP_ADDRESS or http://IP_ADDRESS:8000 (The web port has been changed to 8000 in **WAN interface**(WAN port or WiFi Client Mode) since firmware 5.3.xxx firmware)

You will see the login interface of LPS8N as shown below.

The account details for Web Login are:

User Name: root

Password: dragino

3 Typical Network Setup

3.1 Overview

The LPS8N supports flexible network set up for different environments. This section describes the typical network topology can be set in LPS8N. The network set up includes:

- ✓ **WAN Port Internet Mode**
- ✓ **WiFi Client Mode**
- ✓ **WiFi AP Mode**

3.2 Use WAN port to access Internet

By default, the LPS8N is set to use the WAN port to connect to an upstream network. When you connect the LPS8N's WAN port to an upstream router, LPS8N will get an IP address from the router and have Internet access via the upstream router. The network status can be checked as below:

3.3 Access the Internet as a WiFi Client.

In the WiFi Client Mode, LPS8N acts as a WiFi client and gets DHCP from an upstream router via WiFi.

The settings for WiFi Client is under page [System](#) → [WiFi](#) → [WiFi WAN Client Settings](#)

WiFi

Radio Settings

Channel (1-11) Tx Power (0-18) dBm

WiFi Access Point Settings

Enable WiFi Access Point ☒

WiFi Name SSID

Passphrase (8-32 char) [Show](#) Encryption

WiFi WAN Client Settings

Enable WiFi WAN Client ☒

Host WiFi SSID

Passphrase [Show](#) WiFi Survey

Encryption

[Save&Apply](#) [Cancel](#) [Refresh](#)

In the WiFi Survey Choose the WiFi AP, and input the Passphrase then click Save & Apply to connect.

3.4 Use built-in 4G modem for internet access

If the LPS8N has 3G/4G Cellular modem, user can use it as main internet connection or back up.

First, install the Micro SIM card as below direction

Second, Power off/ ON LPS8N to let it detect the SIM card.

The set up page is [System](#) → [Cellular](#)

While use the cellular as Backup WAN, device will use Cellular for internet connection while WAN port or WiFi is not valid and switch back to WAN port or WiFi after they recover.

Cellular Settings

3.5 Check Internet connection

In the [Home](#) page, we can check the Internet connection.

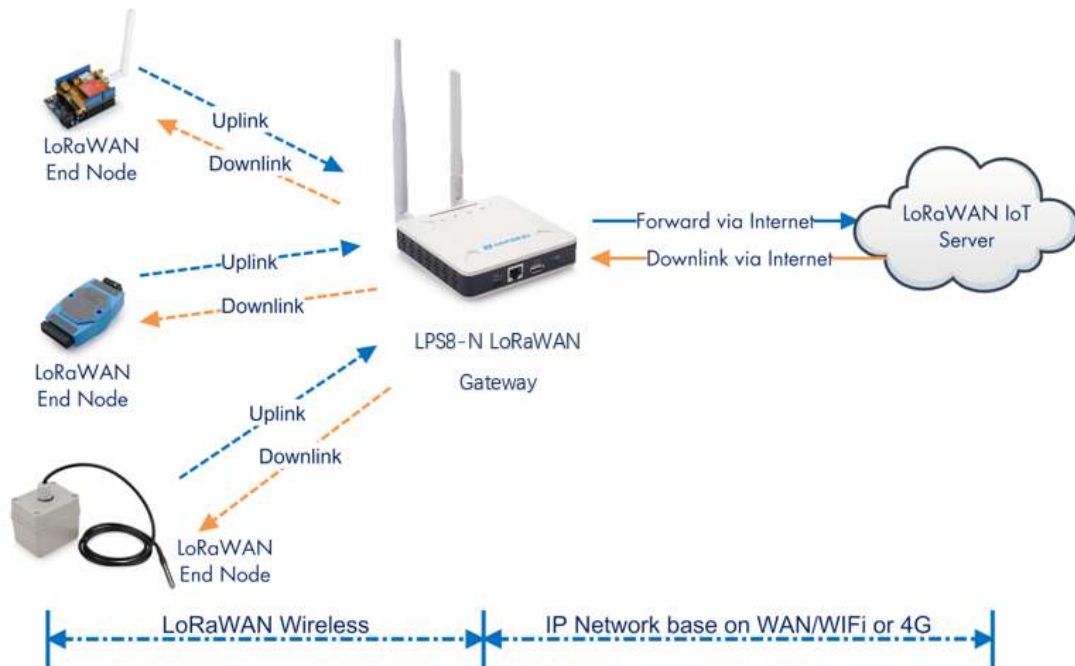

- GREEN Tick  : This interface has Internet connection.
- Yellow Tick  : This interface has IP address but don't use it for internet connection.
- RED Cross  : This interface doesn't connected.

4 Example: Configure as a LoRaWAN gateway

LPS8N is fully compatible with LoRaWAN protocol. It uses the legacy Semtech Packet forwarder to forward the LoRaWAN packets to server. The structure is as below.

LPS8-N in a LoRaWAN IoT Network:

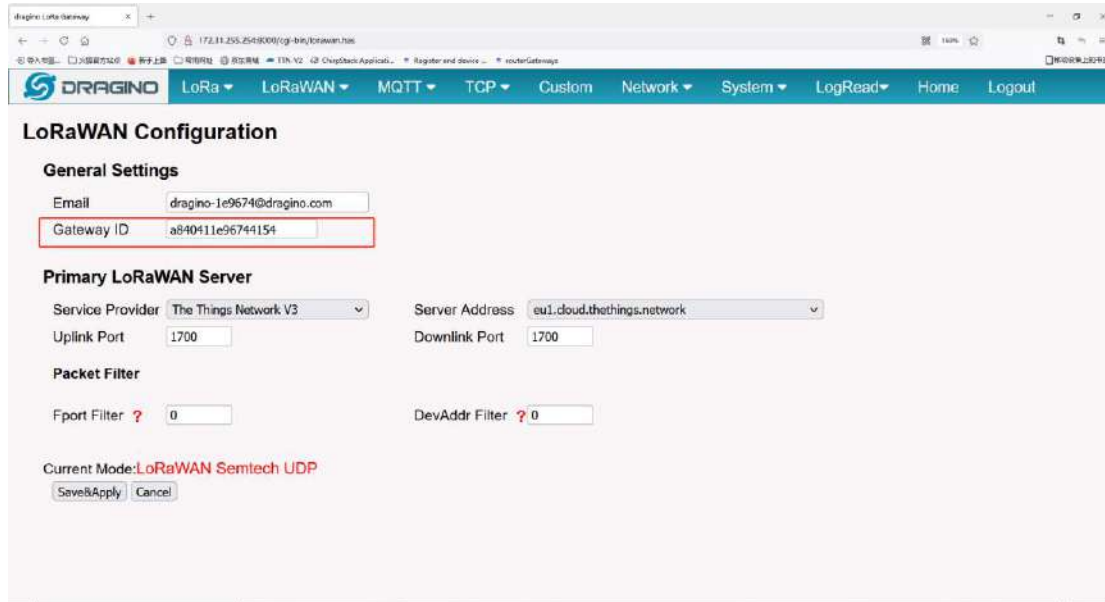

This chapter describes how to use the LPS8N to work with

[TheThingsNetwork v3\(TTN v3\) LoRaWAN Server](http://www.thethingsnetwork.org) (www.thethingsnetwork.org)

4.1 Create a gateway in TTN V3 Server

Step 1: Get a Unique gateway ID.

Every LPS8N has a unique gateway id. The ID can be found at LoRaWAN page:

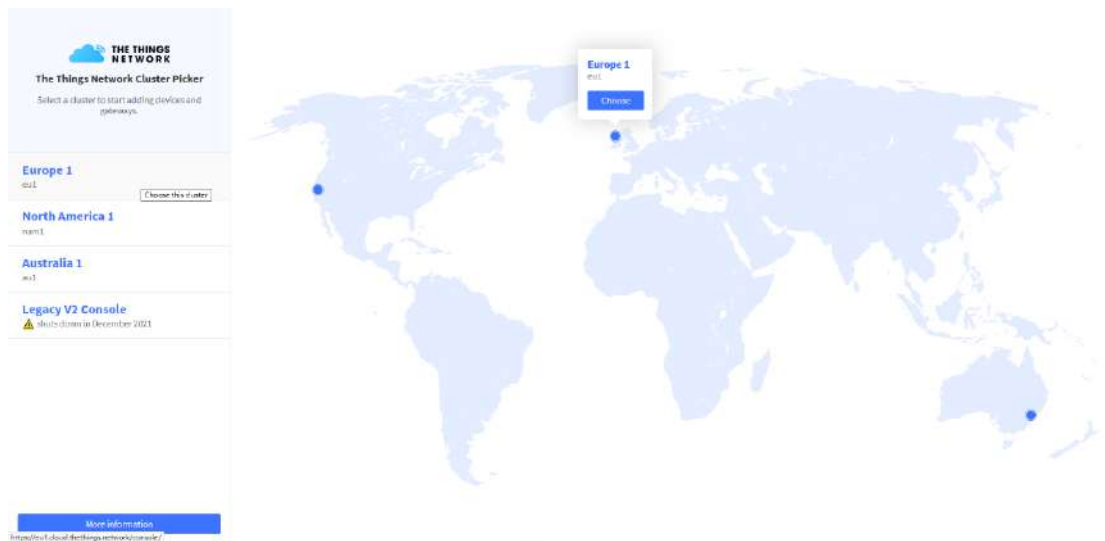

The example gateway id is: **a840411e96744154**

Step 2: Sign up a user account in TTN server

<https://account.thethingsnetwork.org/register>

Step 3: Choose the TTNv3 Cluster Picker

Note: Choose the cluster corresponds to a specific Gateway server address

- Europe 1 **corresponding Gateway server address:** eu1.cloud.thethings.network
- North America 1 **corresponding Gateway server address:** nam1.cloud.thethings.network
- Australia 1 **corresponding Gateway server address:** au1.cloud.thethings.network
- Legacy V2 Console : **TTN v2 shuts down in December 2021**

Step 4: Create a Gateway

Click the Gateway icon and then click Add gateway.

Open the following page:

Add gateway

General settings

Owner*

Gateway ID*

Gateway EUI*

Gateway name*

Gateway description*

Gateway Server address

LoRaWAN options

Frequency plan*

Schedule downlink rate*

Enforce duty cycle*

Schedule any time delay*

Gateway updates

Automatic updates

Channel

Create gateway

Notice: Gateway Server address must match the gateway configuration, otherwise you will have problem for End Node to join the network.

After creating the gateway, you can see the gateway info, as below.

4.2 Configure LPS8N to connect to TTN v3

You can now configure the LPS8N to let it connect to TTN network V3.
Make sure your LPS8N has a working Internet Connection first.

Choose the right server provider and click [Save&Apply](#)

Note: The server address must match the Gateway server address you choose in TTN V3.

In the home page, we can see the LoRaWAN connection is ready now.

In TTN v3 portal, we can also see the gateway is connected.

The screenshot shows the TTN v3 portal interface for the "LPS8-Gateway". The left sidebar contains navigation options: Overview, Live data, Location, Collaborators, API keys, and General settings. The main content area displays the gateway's details:

- Gateway ID:** LPS8-Gateway
- ID:** 00000001
- Last seen:** 3 seconds ago
- Uplink:** 38
- Downlink:** 0
- Collaborator:** 1
- API keys:** 0
- Created:** 1 hour ago

The "General information" section includes:

- Gateway ID: 00000001
- Gateway EUI: A8 48 41 1E 95 74 41 54
- Gateway description: None
- Created at: Jul 5, 2021 11:24:53
- Last updated at: Jul 5, 2021 11:24:53
- Gateway Server address: eu1.cloud.thethings.network

The "LoRaWAN information" section shows:

- Frequency plan: EU_863_870

The "Live data" section displays a log of recent events:

- 12:28:18: Receive gateway status Metrics: {ackr: 0, rxfr: 4, rxin: 4, ...}
- 12:28:00: Receive uplink message DevAddr: 48 00 00 00 FPort: 1100 F
- 12:27:53: Receive uplink message DevAddr: 48 00 00 00 FPort: 1006 F
- 12:27:47: Receive uplink message DevAddr: 48 00 00 00 FPort: 1005 F
- 12:27:42: Receive uplink message DevAddr: 48 00 00 00 FPort: 1004 F
- 12:27:40: Receive gateway status Metrics: {ackr: 0, rxfr: 4, rxin: 6, ...}

The "Location" section shows a map of Europe with a location pin.

4.3 Configure frequency

We also need to set the frequency plan in LPS8N to match the end node we use, so to receive the LoRaWAN packets from the LoRaWAN sensor.

The screenshot shows the 'LoRa Configuration' page. Under 'Radio Settings', the 'Frequency Plan' dropdown menu is open, displaying a list of options: EU868 Europe 868Mhz (863~870), CN470 China 470MHz (470~510), US915 United States 915Mhz (902~928), AU915 Australia 915Mhz (915~928), IN865 India 865MHz (865~867), KR920 Korea 920MHz (920~923), AS923 Asia 923MHz (920~923), AS923 Asia 923MHz (923~925), RU864 Russia 864MHz (864~870), and Customized Bands. The 'Keep Alive Period (sec)' is set to 30. Buttons for 'Save&Apply', 'Disable', and 'Cancel' are visible at the bottom of the settings area.

In logread page, user can check the frequency actually used.

The screenshot shows the 'LogRead' page. Under the 'FreqINFO:' section, it lists the 'SX1301 Channels frequency' and provides details for multiple channels (chan_multSF_0 through chan_multSF_7) and a standard channel (chan_Lora_std). Each entry specifies the Lora MAC, SF (Spread Factor), and the frequency in MHz.

Channel	Lora MAC	SF	Frequency (MHz)
chan_multSF_0	Lora MAC	125kHz, all SF	868.1
chan_multSF_1	Lora MAC	125kHz, all SF	868.3
chan_multSF_2	Lora MAC	125kHz, all SF	868.5
chan_multSF_3	Lora MAC	125kHz, all SF	867.1
chan_multSF_4	Lora MAC	125kHz, all SF	867.3
chan_multSF_5	Lora MAC	125kHz, all SF	867.5
chan_multSF_6	Lora MAC	125kHz, all SF	867.7
chan_multSF_7	Lora MAC	125kHz, all SF	867.9
chan_Lora_std	Lora MAC	250kHz, SF7	868.3

4.4 Add a LoRaWAN End Device

This section shows how to add a LoRaWAN End device to a LoRaWAN network and see the data from TTN web site.

We use [LT-22222-L](#) IO Controller as a reference device - the setup for other LoRaWAN devices will be similar.

Step 1: Create a Device definition in TTN v3 with the OTAA keys from the example LT-22222-L IO Controller device.

Three codes are required to define the device in TTN v3:

- ✓ DEV EUI - Unique ID code for a particular device.
- ✓ APP EUI - ID code for an Application defined in TTN v3.
- ✓ APP Key - Unique key to secure communications with a particular device.

A set of these codes are stored in each device by the manufacturer as the default codes for that particular device. Each device is shipped with a sticker with the default Device EUI as shown below.

Note: You may be able to change these codes in a device by using a configuration facility on the device e.g. the LT-22222 uses a serial port access and a series of AT commands. Changing the codes may be necessary in the case where you have to use codes assigned by a LoRa WAN server.

For the TTN v3 server, you can use the codes set in the device as in the following example.

Select **Add Application** to open the screen below.

Add application

eu1.cloud.thethings.network

Application Server address
eu1.cloud.thethings.network

External Join Server ^{*}
☐ Enabled
☒ Disabled

Join Server address
eu1.cloud.thethings.network

Select OTAA activation mode

The LoRaWAN version for your device should be provided by the manufacturer in a datasheet as LoRaWAN version or LoRaWAN specification. The most commonly used LoRaWAN versions are v1.0.2 and v1.0.3.

First, input the End device ID, AppEUI and DevEUI.

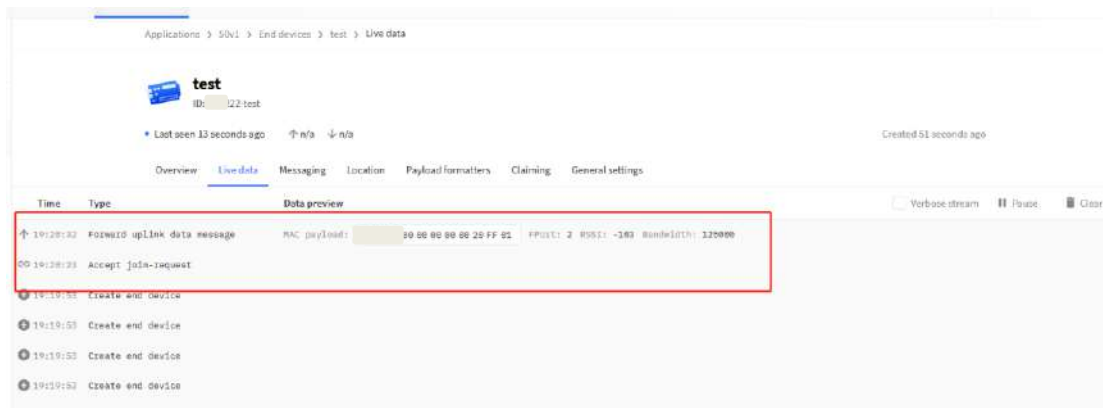

Secondly, choose the corresponding frequency and LoRaWAN class capabilities.

Finally, Application layer settings input the corresponding AppKey. Before saving the configuration, check that the data matches the device.

Step 2: Power on LT-22222-L device and it will automatically join the TTN network. After joining successfully, it will start to upload messages to the TTN v3. Select the Live data tab and you will see the data appearing in the panel.

Note that it may take some time for the device data to appear in the TTN v3 display.

5 Web Configure Pages

5.1 Home

Shows the system running status:

5.2 LoRa Settings

5.2.1 LoRa --> LoRa

This page shows the LoRa Radio Settings. There are a set of default frequency band according to LoRaWAN protocol, and user can customize the band* as well.

Different LPS8N hardware version can support different frequency range:

- **868**: valid frequency: 863Mhz ~ 870Mhz. for bands EU868, RU864, IN865 or KZ865.
- **915**: valid frequency: 902Mhz ~ 928Mhz. for bands US915, AU915, AS923 or KR920

After user choose the frequency plan, he can see the actually frequency in used by checking the page **LogRead --> LoRa Log**

LoRa Configuration

Debug Level: Low

Radio Settings

Keep Alive Period (sec): 30

Frequency Plan: EU868 Europe 868Mhz (863~870)

- EU868 Europe 868Mhz (863~870)
- EU868 Europe 868Mhz (863~870)
- CN470 China 470MHz (470~510)**
- US915 United States 915Mhz (902~928)
- AU915 Australia 915Mhz (915~928)
- IN865 India 865MHz (865~867)
- KR920 Korea 920MHz (920~923)
- AS923 Asia 923MHz (920~923)
- AS923 Asia 923MHz (923~925)
- RU864 Russia 864MHz (864~870)
- Customized Bands

Note *: See this instruction for how to customize frequency band:

http://wiki.dragino.com/index.php?title=Customized_Frequency_Band_for_Gateway

5.2.2 LoRa --> ABP Decryption

The LPS8N can communicate with LoRaWAN ABP End Node without the need of LoRaWAN server. It can be used in some cases such as:

- No internet connection.
- User wants to get data forward in gateway and forward to their server based on MQTT/HTTP, etc. (Combine ABP communication method and MQTT forward together).

Detail of this feature:

[http://wiki.dragino.com/index.php?title=Communication with ABP End Node](http://wiki.dragino.com/index.php?title=Communication_with_ABP_End_Node)

Decrypt ABP End Node Packets

5.5.7 System --> Remote Mgmt & Auto Update

Auto Provision is the feature for batch configure and remote management. It can be used in below two cases:

Case 1:
Batch
configure
gateways
before
deploy

Case 2:
Maintain
gateway
configure
from
cloud

How it works

1. Gateways search (on every boot or 23:00 every day) the provision URL to get configure files or script files.
2. Gateways compare version number of the configure file, and process update if configure files has higher version.

Please see this document for detail:

http://www.dragino.com/downloads/index.php?dir=LoRa_Gateway/LPS8N/Firmware/Application_Note/&file=Auto-update-feature.pdf

R-SSH is for remote access device and management, introduction for how to use:

5.5.8 System --> Firmware Upgrade

We keep improving the LPS8N firmware for new features and bug fixes. Below are the links for reference.

- **Latest firmware:** [LoRa Gateway Firmware](http://www.dragino.com/downloads/index.php?dir=LoRa_Gateway/LPS8N/Firmware),
(http://www.dragino.com/downloads/index.php?dir=LoRa_Gateway/LPS8N/Firmware)
- **Change Log:** [Firmware Change Log](http://www.dragino.com/downloads/downloads/LoRa_Gateway/LPS8N/Firmware/ChangeLog).
(http://www.dragino.com/downloads/downloads/LoRa_Gateway/LPS8N/Firmware/ChangeLog)

The file named as **dragino-lgw-xxxxx-squashfs-sysupgrade.bin** is the upgrade Image. as below.

Web → System → Firmware Upgrade

The screenshot shows a web interface titled "Firmware Update". It contains two main sections. The first section, "Upload Firmware File", has a "Choose File" button next to the text "No file chosen", and an "Upload" button next to the text "Upload selected file.". The second section, "Proceed with Flash", has a "Preserve Settings" checkbox which is currently checked, and two buttons: "Proceed" and "Cancel".

Select the required image and click **Upload**. The image will be uploaded to the device, and then click **Process** to upgrade.

NOTE: You normally need to **uncheck** the **Preserve Settings** checkbox when doing an upgrade to ensure that there is no conflict between the old settings and the new firmware. The new firmware will start up with its default settings.

The system will automatically boot into the new firmware after upgrade.

Note *: User can also upgrade firmware via Linux console

SCP the firmware to the system **/var** directory and then run

```
root@OpenWrt:~# /sbin/sysupgrade -n /var/Your_Image
```

NOTE: it is important to transfer the image in the /var directory, otherwise it may exceed the available flash size.

5.5.9 System --> Reboot/Reset

5.5.10 System --> Package Maintain

Package Management

6.6 Auto-Provision

Auto Provision is the feature for batch configure and remote management. It can be used in below two cases:

Case 1:
Batch
configure
gateways
before
deploy

Case 2:
Maintain
gateway
configure
from
cloud

How it works

1. Gateways search (on every boot or 23:00 every day) the provision URL to get configure files or script files.
2. Gateways compare version number of the configure file, and process update if configure files has higher version.

Please see this document for detail:

http://www.dragino.com/downloads/index.php?dir=LoRa_Gateway/LPS8N/Firmware/Application_Note/&file=Auto-update-feature.pdf

7 Linux System

The LPS8N is based on the OpenWrt Linux system. It is open source, and users are free to configure and modify the Linux settings.

7.1 SSH Access for Linux console

User can access the Linux console via the SSH protocol. Make sure your PC and the LPS8N are connected to the same network, then use a SSH tool (such as [putty](#) in Windows) to access it.

IP address: IP address of LPS8N

Port: 22 or 2222 (SSH port in WAN interface has been change to 2222 since firmware 5.3.xx, for security reason)

User Name: **root**

Password: **dragino** (default)

After logging in, you will be in the Linux console and can enter commands as shown below.

```

10.130.21 - PuTTY
login as: root
root@10.130.21's password:

BusyBox v1.22.1 (2016-10-09 21:13:07 CST) built-in shell (ash)
Enter 'help' for a list of built-in commands.

  DRAGINO
W i F i, L i n u x, M C U, E m b e d d e d

OpenWRT BARRIER BREAKER 14.07
Version: Dragino-v2 IoT-3.4.0
Build Mon Oct 10 09:53:00 CST 2016

www.dragino.com

root@dragino-1347dc:~#

```

The “logread -f” command can be used to debug how system runs.

```

```

7.2 Edit and Transfer files

The LPS8N supports the **SCP protocol** and has a built-in **SFTP server**. There are many ways to edit and transfer files using these protocols.

In Windows, one of the easiest methods is using the [WinSCP](#) utility.

After establishing access via WinSCP to the device, you can use an FTP style window to drag / drop files to the LPS8N, or edit the files directly in the windows.

Screenshot is as below:

7.3 File System

The LPS8N has a 16MB flash and a 64MB RAM. The /var and /tmp directories are in the RAM, so contents stored in /tmp and /var will be erased after rebooting the device. Other directories are in the flash and will remain after reboot.

The Linux system uses around 8MB ~10MB flash size which means there is not much room for user to store data in the LPS8N flash.

You can use an external USB flash memory device to extend the size of flash memory for storage.

7.4 Package maintenance system

LPS8N uses the OpenWrt [OPKG package maintenance system](#). There are more than 3000+ packages available in our package server for users to install for their applications. For example, if you want to add the *iperf* tool, you can install the related packages and configure LPS8N to use *iperf*.

Below are some example *opkg* commands. For more information please refer to the [OPKG package maintain system](#) (<https://wiki.openwrt.org/doc/techref/opkg>)

In Linux Console run:

```
root@dragino-169d30:~# opkg update // to get the latest packages list
```

```
root@dragino-169d30:~# opkg list //shows the available packages
```

```
root@dragino-169d30:~# opkg install iperf // install iperf
```

The system will automatically install the required packages as shown below.

```
root@dragino-169d30:/etc/opkg# opkg install iperf
```

```
Installing iperf (2.0.12-1) to root...
```

```
Downloading http://downloads.openwrt.org/snapshots/packages/mips\_24kc/base/iperf\_2.0.12-1\_mips\_24kc.ipk
```

```
Installing uclibcxx (0.2.4-3) to root...
```

```
Downloading http://downloads.openwrt.org/snapshots/packages/mips\_24kc/base/uclibcxx\_0.2.4-3\_mips\_24kc.ipk
```

```
Configuring uclibcxx.
```

```
Configuring iperf.
```

8 Upgrade Linux Firmware

We keep improving the LPS8N Linux side firmware for new features and bug fixes. Below are the links for reference.

- **Latest firmware:** [LoRa Gateway Firmware](http://www.dragino.com/downloads/index.php?dir=LoRa_Gateway/LG02-OLG02/Firmware),
(http://www.dragino.com/downloads/index.php?dir=LoRa_Gateway/LG02-OLG02/Firmware)
- **Change Log:** [Firmware Change Log](http://www.dragino.com/downloads/downloads/LoRa_Gateway/LG02-OLG02/Firmware/ChangeLog).
(http://www.dragino.com/downloads/downloads/LoRa_Gateway/LG02-OLG02/Firmware/ChangeLog)

The file named as **xxxxx-xxxxx-squashfs-sysupgrade.bin** is the upgrade Image. There are different methods to upgrade, as below.

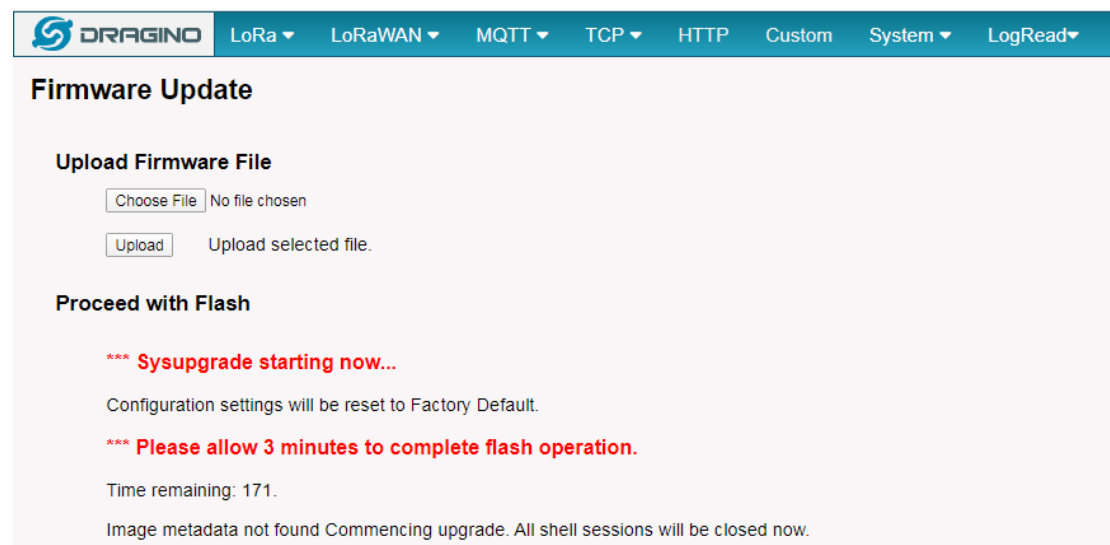

8.1 Upgrade via Web UI

Go to the page: **Web → System → Firmware Upgrade**

Select the required image and click **Flash Image**. The image will be uploaded to the device, and then click **Process Update** to upgrade.

NOTE: You normally need to **uncheck** the **Preserve Settings** checkbox when doing an upgrade to ensure that there is no conflict between the old settings and the new firmware. The new firmware will start up with its default settings.

The system will automatically boot into the new firmware after upgrade.

The screenshot shows the Dragino web interface for firmware upgrade. At the top is a navigation bar with the Dragino logo and tabs for LoRa, LoRaWAN, MQTT, TCP, HTTP, Custom, System, and LogRead. The 'System' tab is selected, leading to the 'Firmware Update' page. The page has a light purple background and contains two main sections: 'Upload Firmware File' and 'Proceed with Flash'. In the 'Upload Firmware File' section, there is a 'Choose File' button (disabled) and an 'Upload' button. Below this, the 'Proceed with Flash' section displays a red status message: '*** Sysupgrade starting now...'. It also shows 'Configuration settings will be reset to Factory Default.', another red message: '*** Please allow 3 minutes to complete flash operation.', and a timer: 'Time remaining: 171.'. At the bottom, it states: 'Image metadata not found Commencing upgrade. All shell sessions will be closed now.'

8.2 Upgrade via Linux console

SCP the firmware to the system **/var** directory and then run

```
root@OpenWrt:~# /sbin/sysupgrade -n /var/Your_Image
```

NOTE: it is important to transfer the image in the /var directory, otherwise it may exceed the available flash size.

9 FAQ

9.1 How can I configure for a customized frequency band?

See below link for how to customize frequency band:

http://wiki.dragino.com/index.php?title=Customized_Frequency_Band_for_Gateway

9.2 Can I make my own firmware for the gateway, Where can I find the source code?

Yes, You can make your own firmware for the LPS8N for branding purposes or to add customized applications.

The source code and compile instructions can be found at:

https://github.com/dragino/openwrt_lede-18.06

9.3 Can I use 868Mhz version for 915Mhz bands?

It is possible but the distance will be very short, you can select US915 frequency band in 868Mhz version hardware. It will work but you will see the performance is greatly decreased because the 868Mhz version has an RF filter for band 863~870Mhz, all other frequencies will have high attenuation.

10 Trouble Shooting

10.1 I get kernel error when install new package, how to fix?

In some cases, when installing a package with **opkg**, it will generate a kernel error such as below due to a mismatch I the kernel ID:

```
root@dragino-16c538:~# opkg install kmod-dragino2-si3217x_3.10.49+0.2-1_ar71xx.ipk
Installing kmod-dragino2-si3217x (3.10.49+0.2-1) to root...
Collected errors:
* satisfy_dependencies_for: Cannot satisfy the following dependencies for kmod-dragino2-si3217x:
*   kernel (= 3.10.49-1-4917516478a753314254643facdf360a) *
* opkg_install_cmd: Cannot install package kmod-dragino2-si3217x.
```

In this case, you can use the `--force-depends` option to install such package as long as the actual kernel version is the same.

```
Opkg install kmod-dragino2-si3217x_3.10.49+0.2-1_ar71xx.ipk --force-depends
```

10.2 How to recover the LPS8N if the firmware crashes

Please follow this instruction to recover your gateway:

http://wiki.dragino.com/index.php?title=Recover_Gateway

10.3 I configured LPS8N for WiFi access and lost its IP. What to do now?

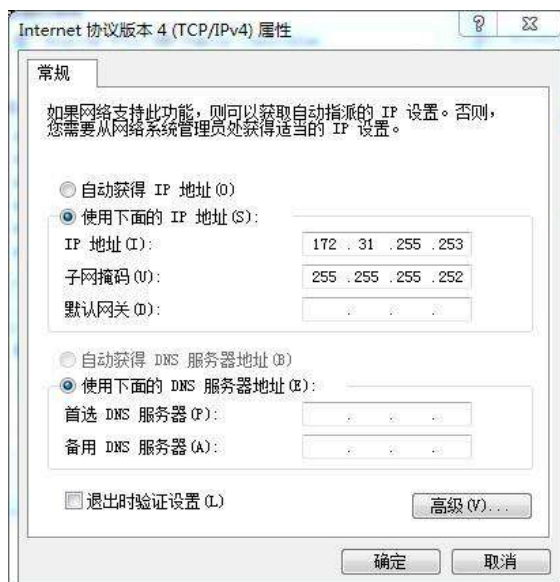

The LPS8N has a fall-back IP address on its WAN port. This IP is always enabled so you can use the fall-back IP to access LPS8N no matter what the WiFi IP is. The fall back IP is useful for connecting and debug the unit.

(Note: fallback IP can be disabled in the WAN and DHCP page)

Steps to connect via fall back IP:

1. Connect PC's Ethernet port to LG01's WAN port
2. Configure PC's Ethernet port has
IP: 172.31.255.253 and
Netmask: 255.255.255.252

As below photo:

3. In the PC, use IP address 172.31.255.254 to access the LPS8N via Web or Console. Please note the latest firmware uses port 8000 for http and 2222 for ssh access.

10.4 I connect to the LPS8N's SSID but LPS8N didn't assign DHCP IP to my laptop?

This is a known bug for the firmware version before 2019-09-23 for LPS, the issue was fixed since version: LG02_LG08--build-v5.2.1569218466-20190923-1402.

In the old version, user can use the [fall back ip method](#) to access and configure the device.

11 Order Info

PART: LPS8N-XXX-YYY:

XXX: Frequency Band

- **868**: valid frequency: 863Mhz ~ 870Mhz. for bands EU868, RU864, IN865 or KZ865.
- **915**: valid frequency: 902Mhz ~ 928Mhz. for bands US915, AU915, AS923 or KR920

YYY: 4G Cellular Option

- **EC25-E**: EMEA, Korea, Thailand, India.
- **EC25-A**: North America/ Rogers/AT&T/T-Mobile.
- **EC25-AU**: Latin America, New Zeland, Taiwan
- **EC25-J**: Japan, DOCOMO/SoftBank/ KDDI

More info about valid bands, please see [EC25-E product page](#).

12 Packing Info

Package Includes:

- ✓ LPS8N LoRaWAN Gateway x 1
- ✓ Stick Antenna for LoRa RF part. Frequency is one of 470 or 868 or 915Mhz depends the model ordered
- ✓ Packaging with environmental protection paper box

Dimension and weight:

- ✓ Device Size: 12 x 12 x 3 cm
- ✓ Weight: 187g
- ✓ Package Size: 14.5 x 13.5 x 6 cm
- ✓ Weight: 300g

13 Support

- Try to see if your questions already answered in the [wiki](#).

- Support is provided Monday to Friday, from 09:00 to 18:00 GMT+8.
Due to different timezones we cannot offer live support. However, your questions will be answered as soon as possible in the before mentioned schedule.
- Provide as much information as possible regarding your enquiry (product models, accurately describe your problem and steps to replicate it etc) and send a mail to:

support@dragino.com

14 FCC Warning

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation
